● 提醒 & 說明：

- 本修改法出自 MHServerEMU Discord, 感謝原作者大德, 原作內容附於文末.
- 本檔案僅適用單機版玩家, 網路線上主機玩家不適用.
- 實戰還得搭配 Axis Raid TEST 大獎章, 或是 EMU !boost 指令, 才能單人殺 Boss.
- 適用於 MHServerEmu 1.0.1 版

● 安裝：

安裝時不需關閉遊戲和單機版伺服器, 但要重新啟動伺服器, 此修改檔才會生效.

安裝方法: 將 LiveTuningData-AXIS_solo.json 檔案 copy 至 \遊戲資料夾\MHServerEmu\Data\Game\LiveTuning\ 中. (此檔案原本不存在)

移除方法: 將 \遊戲資料夾\MHServerEmu\Data\Game\LiveTuning\LiveTuningData-AXIS_solo.json 刪除或改掉副檔名.

How to beat the second encounter of the Axis raid solo, in 2 simple steps:

Step 1, get strong enough to kill the sentinels.
Step 2, add the following LiveTuningData to a file of your choice

```
[
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldCenter.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  },
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldLeft.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  },
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldRight.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  }
]
```

You can add

```
{
    "Prototype":
"Entity/Characters/PetsAndSummons/MissionAllies/Endgame/Raids/Axis/GenoshaRaidSHIELDEngineer.prototype",
    "Setting": "eWETV_MobHealth",
    "Value": 0.3
  }
```

in case you mess up the timing (see explanation below) and want the engineers to die so you can try again. 0.3 is a decent survivability, 0.2 might be a little bit too fast for comfort, but anything above 0.3 will just take forever to get them killed. (已编辑)

5

How does it work?
In the encounter there are 3 nullifiers that the engineers need to charge. By themselves, they do crappy damage, so boost them up quite a bit. Now, that alone won't make them do much, because what is 50 x almost nothing? Still almost nothing! But here's the fun part! When 2 nullifiers are firing at the same time, they get a hidden damageboost. By a lot. Like, a LOT a lot! Then the formula becomes 50 x almost nothing x 9001! Yes, that is over 9000! And suddenly, the shield will drop in a matter of seconds!

But wait, I said only 2 were needed, so why boost all 3? Isn't it enough to boost Center and Left or Right? If only! You see, the engineers may be smart, but they are also super stupid. In other words, they may actually bug out and stand next to a nullifier and do absolutely nothing. If the wrong one bugs, your encounter is gonna be very very boring! So boost all 3, just to be safe.

Key to this is timing. You still need the engineers to charge the nullifiers and you do need to activate 2 of them within a few seconds of each other, so they both fire at the same time. If you do, the shield goes down in 3-4 seconds. If you don't.... Try again. The easiest oens to do are Right and Center, but the beams last for 10 seconds each, so with some decent Movement Power usage, you should be able to get from Right to Left even if Center bugs out and still make it in time. - 以下是原作的 Chat GPT 翻譯中文版：

原作者: Ambrodel

如何在 軸心國團隊副本 (Axis Raid) 的第二場遭遇戰中單人通關，只要 2 個簡單步驟：

步驟 1：變得足夠強，能殺掉哨兵 (Sentinels)。
步驟 2：將以下的 LiveTuningData 加入你選擇的檔案中

```
[
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldCenter.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  },
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldLeft.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  },
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldRight.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  }
]
```

另外，你也可以加入：

```
{
    "Prototype": "Entity/Characters/PetsAndSummons/MissionAllies/Endgame/Raids/Axis/GenoshaRaidSHIELDEngineer.prototype",
    "Setting": "eWETV_MobHealth",
    "Value": 0.3
}
```

這是為了在你時機掌握失誤（見下方說明）時，讓工程師能死掉，好讓你重來。
0.3 是不錯的生存值，0.2 可能太快，不太好掌握，但超過 0.3 則會變得要花很久才能殺死他們.

---

*原理是什麼？

在這場戰鬥中，有 3 個虛化器 (Nullifiers) 需要由工程師充能。
它們的單體傷害非常低，所以我們要大幅提高它們的輸出。

不過，單純把它們的傷害設成 50 還是不會很痛，因為「50 x 幾乎為零」還是接近零。

但有趣的地方來了！
當兩個虛化器同時開火時，它們會獲得隱藏的傷害加成——而且非常高！
高到變成：「50 x 幾乎為零 x 9001」！
是的，超過 9000！ 然後，敵人的護盾會在數秒內被打掉。

*那為什麼要強化 3 個，而不是只強化中間 + 左或右？

因為工程師雖然很聰明，但也非常蠢。
他們有可能「卡 AI」，站在虛化器旁什麼事都不做。
如果卡住的是「沒加強的那一個」，你的戰鬥會變得超無聊。
所以，保險起見，全部 3 個都加強。

*關鍵在於時機
你需要讓工程師先去充能虛化器，並且必須在幾秒內啟動 2 台，讓它們同時開火。
如果做到了，護盾會在 3-4 秒內消失。
如果沒做到……那就重來。

最簡單的組合是「右邊 + 中間」，
但每道光束都會持續 10 秒，所以如果中間的虛化器卡住，
你也可以透過靈活運用「移動技能」(Movement Powers)，在時間內從右邊跑到左邊，依然能完成同步開火。
