MHO 1.52 版 Axis Raid Solo Modification File 2026.04.30

- **Notes & Instructions**：

  - This modification method originates from the MHServerEMU Discord.
    Special thanks to the original author, Ambrodel. The original content is attached at the end.

  - This file is only applicable for single-player (offline) mode. It does not apply to online hosts..

  - In actual play, you will still need to use the Axis Raid TEST Medal or the EMU **!boost** command to solo kill the Boss..

  - Compatible with MHServerEmu v1.0.1

- **Installation：**

  You do not need to close the game or the single-player server when installing, but you must restart the server for this modification to take effect.

  Installation method: Copy the file **LiveTuningData-AXIS_solo.json** into **\GameFolder\MHServerEMU\Data\Game**
  (this file does not originally exist).

  Removal method: Delete \GameFolder\MHServerEMU\Data\Game\LiveTuningData-AXIS_solo.json, or rename File extension.

How to beat the second encounter of the Axis raid solo, in 2 simple steps:

Step 1, get strong enough to kill the sentinels.
Step 2, add the following LiveTuningData to a file of your choice

```
[
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldCenter.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  },
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldLeft.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  },
  {
    "Prototype": "Powers/EnemyPowers/Boss/OnslaughtRaid/NullifierDoTOnShieldRight.prototype",
    "Setting": "ePTV_PowerDamagePVE",
    "Value": 50.0
  }
]
```

You can add

```
{
    "Prototype":
"Entity/Characters/PetsAndSummons/MissionAllies/Endgame/Raids/Axis/GenoshaRaidSHIELDEngineer.prototype",
    "Setting": "eWETV_MobHealth",
    "Value": 0.3
  }
```

in case you mess up the timing (see explanation below) and want the engineers to die so you can try again. 0.3 is a decent survivability, 0.2 might be a little bit too fast for comfort, but anything above 0.3 will just take forever to get them killed. (已编辑)

How does it work?
In the encounter there are 3 nullifiers that the engineers need to charge. By themselves, they do crappy damage, so boost them up quite a bit. Now, that alone won't make them do much, because what is 50 x almost nothing? Still almost nothing! But here's the fun part! When 2 nullifiers are firing at the same time, they get a hidden damageboost. By a lot. Like, a LOT a lot! Then the formula becomes 50 x almost nothing x 9001! Yes, that is over 9000! And suddenly, the shield will drop in a matter of seconds!

But wait, I said only 2 were needed, so why boost all 3? Isn't it enough to boost Center and Left or Right? If only! You see, the engineers may be smart, but they are also super stupid. In other words, they may actually bug out and stand next to a nullifier and do absolutely nothing. If the wrong one bugs, your encounter is gonna be very very boring! So boost all 3, just to be safe.

Key to this is timing. You still need the engineers to charge the nullifiers and you do need to activate 2 of them within a few seconds of each other, so they both fire at the same time. If you do, the shield goes down in 3-4 seconds. If you don't.... Try again. The easiest oens to do are Right and Center, but the beams last for 10 seconds each, so with some decent Movement Power usage, you should be able to get from Right to Left even if Center bugs out and still make it in time.
